## POLYPROPYLENE TRAYS

*Trays which are able to protect the fruit efficiently during its long journey to the international markets.*

## ■ PROTECTING ALVEOLUS/POCKETS

Thanks to the exclusive design of the UPC Alveolar Trays coming from the unique analysis of polar and equatorial geometry of the fruit, the repose inside the pocket is ensured. Therefore while traveling in this comfortable and safer way the fruit is free of any risk of friction or blow. The composition of the sides and nerves of the tray allow the expansion or contraction of all the alveolus, allowing its easy adjustment to the size and shape of the fruit.

## ■ ALVEOLAR LOCKABLE DISTRIBUTION

This feature allows each alveolus or pocket to be placed in the space formed by the lower fruits. Thus the smashing of fruit in just one point is avoided and a better use of the box height is obtained.

## ■ QUALITY AND PURITY

In the manufacture of the UPC Alveolar Trays only 100% virgin polypropylene of the highest quality is used. Thus a clean and bright color product is obtained, as well as with a soft and smooth surface, very resistant to stress and cracking.

## ■ PERFECT ADJUSTMENT

The weight / volume ratio used for the different sizes of fruit corresponds to the average value obtained in different areas and ripening seasons. In addition, the cut in its corners let the UPC Alveolar Trays perfectly fit inside boxes with or without inner corners.

## ■ CUADRO DE BANDEJAS POLIPROPILENO

Material	Dimensions (mm)	Sizes	Color	Use	Unit x Box
Polypropylene	490 x 285	10 12 14 15 16 18 20 22 24 26 28 29 30 32 33 34 36 39 42 45 49 54	Red	Stone Fruits	1000
